The first release was a version for the Apple II, followed by versions for the AT&T UniRoyal (1981), IBM PC (1983), and then the Apple Macintosh (1984), before introducing the first personal version, AutoCAD LT (1985). From 1987 to 1991, Autodesk's "Student" version of AutoCAD was available to high school and college students for free. In 1994, the "Professional" version of AutoCAD was released. In 1998, AutoCAD 2002 was released to the general public, as well as the V2R10 update. AutoCAD 2004 was the first version to be fully native for Windows, and the first to feature the ribbon user interface, and in 2003 AutoCAD was released for mobile devices. In 2005, AutoCAD 2008 and AutoCAD LT 2009 were released, which were respectively the last versions to support the AutoCAD LT and AutoCAD "Professional" names. Beginning with AutoCAD 2009, the following versions of AutoCAD and AutoCAD LT have been released: AutoCAD 2009; AutoCAD 2010; AutoCAD 2011; AutoCAD 2012; AutoCAD 2013; AutoCAD LT 2013; AutoCAD LT 2014; AutoCAD LT 2015; AutoCAD LT 2016; and AutoCAD LT 2017. In 2011, Autodesk announced the launch of AutoCAD LT, which replaced AutoCAD WS (Web Edition) as a web-based version of AutoCAD. Today, there are two major editions of AutoCAD: AutoCAD LT and AutoCAD, which is an alternative name for the version which is more commonly known as AutoCAD. AutoCAD LT AutoCAD LT is a web-based version of AutoCAD, designed specifically for use by non-technical business users and students, including the military and aviation and railroad industries. AutoCAD LT uses the same models and work areas of the standard AutoCAD program as a desktop version, but only the design is created on the web; all drawings are created offline and the pages are saved to the server. After an online session is finished, the user can download the pages to their desktop or mobile device. AutoCAD LT is integrated into AutoCAD's online platform, meaning the user can

Increasing numbers of computing devices are utilizing WLANs. Among the many products which are deployed using WLAN technology are wireless printing products such as wireless printers and wireless multifunction devices, which are colloquially known as "MFD's". Examples of such MFD products include the HP Photosmart MFP's, the HP Photosmart C3960 MFD's and the HP Photosmart Business MFD's, which are sold by the HP brand of the Hewlett Packard Company of Palo Alto, Calif. MFD's are often connected to a wireless LAN (WLAN) network. MFD's may be used to share printers and other resources over a WLAN. MFD's are also sometimes used to perform functions such as scanning, copying, faxing, printing, and other functions. A WLAN is typically limited to a designated service area within which a device may communicate with an access point to access a network. In many situations, the coverage area is a small (e.g. 1-10 meters) area within a room. The coverage area of a typical WLAN is often less than that of the area in which the MFD is situated. To address this, it is known to incorporate WLAN technology into MFD's so that when the MFD is deployed, it connects to a WLAN. A wireless printer, in this configuration, would then be connected to the MFD and the MFD would connect to the WLAN. The WLAN may be used to provide connectivity to a network. When an MFD is deployed, the MFD may connect to a WLAN through an access point. The access point may also be referred to as a ◆
